In this first OSINT, challenge. The crazy story line is introduced, whereby we are tracking an underground criminal RaaS operation. A domain name(646f776e756e646572.xyz) linked to the organization is given and we need to find the phone number of the person it is registered to. The first thing that comes to mind is a WHOis lookup of the domain. After testing a couple websites, who.is gave the answer.
